

## Mass Balance

### Comprehensive Monitoring for Precision Production

#### Tired of the inability to do proper Mass Balancing in your plants?

Discover unparalleled control over your production process with our cutting-edge Mass Balance Module.

Instead of manually documenting data and tracking raw material through processing, the Mass Balance Module conducts this analysis for you.

#### Key Benefits:

- **Loss Identification** – Assign value to losses any time of day so the ROI of any improvements can be easily quantified.
- **Output Monitoring** – Track activities all the way down to the component level and through output to identify the ideal inputs, recipe, or overall process.
- **Paired with Dairy Expert Advice** – Looking for someone who can walk the walk? We pair this software with our dairy experts who can baseline your plant against our industry best practices.

#### Key Features:

- Zone-based mass balance areas are designed to closely monitor production processes for accurate data collection.
- Periodic batch creation tailored to each client's needs, captures data on set intervals for deeper analysis.
- Visual representation of losses and breakdowns enables quick detection and rectification.
- Comprehensive product analysis for in-depth evaluation of single and multi-product processes.
- Advanced reporting functionality for diverse data analysis and efficient decision-making against almost any Business Intelligence software tool.

### How it Measures:

Our team conducts a detailed analysis of each plant to determine the “right” zones and methods to capture. A cheese plant is balanced differently from a fluid plant. Mass balance is vital to a plant’s financial results – that’s why the entire plant is assessed, and weight and component-level data is analyzed. Our team uses this analysis to determine what will be completed immediately and in the future.

### Get Started:

Get in control of your production losses with the Mass Balance Module. Start leveraging the power of detailed data analysis to benchmark your plant to improve performance. With our module and optional plant experts, you can optimize processes and streamline production across every zone in your facility.

Schedule a demo today and see the difference for yourself.

## About

Ever.Ag’s mission is to create innovative AgTech solutions and services that empower agriculture, food, and beverage supply chains to feed a growing world.

With over 30 years of experience and industry-leading innovations, our technology, risk management, and market intelligence solutions provide our customers with the insights and tools they need to thrive.

From industry-leading technology solutions to in-depth market analysis, Ever.Ag partners with you to successfully navigate the complexities of operating a dairy business today.
